DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a system and method for generating a lesson plan, classified in class 434, subclass 322.
 - II. Claims 19-22, drawn to a course matrix, classified in class 434, subclass 118.
 - III. Claims 23-46, drawn to a system and method for delivery of a course, classified in class 434, subclass 350.
 - IV. Claims 47-54, drawn to a system and method for involving parents in education, classified in class 434, subclass 236.
 - V. Claims 55-79, drawn to a system and method for transferring data from a source window to a destination window, classified in class 709, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions different effects are generated by all five inventions.

Invention I is directed to a method and system for generating a lesson plan which include the steps of associating a plurality of standard objectives with the course, providing a plurality of learning activities for selection, each learning activity associated with atleast one standard objective for the course, receiving a selection of at least a subset of the learning activities, and generating a lesson plan based on the selected learning activities. Invention I has the effect of creating a lesson plan.

Invention II is directed to a course matrix, which includes a time matrix, a plurality of teach topics, and a plurality of standard objectives. There is no correlation between the structure of Invention I and Invention II.

Art Unit: 3713

Invention III is directed to a system and method for the delivery of a course. Including the steps of releasing a learning activity, including associating the learning activity with atleast one student, receiving a release instruction for the learning activity, and providing access to the learning activity for the student associated with the learning activity. There is no structure which links Invention III to either Invention I or II. Further invention III has the effect of releasing a learning activity to a user.

Invention IV is directed to a system and method for involvement of parents in educating students, including: providing a parent of the student access to a plurality of learning activities for the student, at least a subset of the learning activies comprising an assessment procedure and roviding the parent a score for each of atleast a subset of the assessment procedure completed by the student. Invention IV has the effect of allowing a parent access to a student's records.

Invention V is directed to a system and method for transferring data from a source window to a destination window. There is no structural link between this Invention and the Inventions of Groups I-IV. The effect of this invention is the transferring of data. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
